Preface **xiii**

Acknowledgements **xv**

Notes on the use of this book **xvii**

1 X-rays and their interaction with matter **1**
1.1 X-rays – waves and photons 4
1.2 Scattering 5
1.3 Absorption 17
1.4 Refraction and reflection 23
1.5 Coherence 24
1.6 Magnetic interactions 26

2 Sources of X-rays **29**
2.1 Early history and the X-ray tube 29
2.2 Introduction to synchrotron radiation 30
2.2.1 Characterising the beam: brilliance 32
2.3 Synchrotron radiation from a circular arc 33
2.3.1 Example: Bending magnet radiation at the ESRF 38
2.4 Insertion devices 40
2.4.1 Undulator radiation 41
2.5 Emittance and the diffraction limit 54
2.6 The free-electron laser 57

3 Refraction and reflection from interfaces **61**
3.1 Refraction and phase shift in scattering 62
3.2 Refractive index and scattering length density 64
3.3 Refractive index including absorption 68
3.4 Snell's law and the Fresnel equations in the X-ray region 70
3.5 Reflection from a homogeneous slab 73
3.6 Specular reflection from multilayers 78
3.7 Reflectivity from a graded interface 83
3.8 Rough interfaces and surfaces 84
3.8.1 The limiting case of Fresnel reflectivity 88
3.8.2 Uncorrelated surfaces 88
3.8.3 Correlated surfaces 89
3.9 Examples of reflectivity studies 92
3.9.1 Langmuir layers 92
3.9.2 Free surface of liquid crystals 94
3.10 X-ray optics 98
3.10.1 Refractive X-ray optics 98

3.10.2 Curved mirrors . . . 103

4 Kinematical diffraction 107
4.1 Two electrons . . . 107
4.2 Scattering from an atom . . . 112
4.3 Scattering from a molecule . . . 114
4.4 Scattering from a crystal lattice . . . 116
4.4.1 The Laue condition and reciprocal space . . . 118
4.4.2 The Ewald sphere . . . 125
4.4.3 The unit cell structure factor . . . 125
4.4.4 Lattice sums in 1, 2 and 3 dimensions . . . 129
4.4.5 Quasiperiodic lattices . . . 131
4.4.6 Crystal truncation rods . . . 135
4.4.7 Lattice vibrations, the Debye-Waller factor and TDS . . . 139
4.5 The measured intensity from a crystallite . . . 144
4.5.1 The Lorentz factor . . . 146
4.5.2 The Lorentz factor in 2D . . . 151
4.6 Applications of kinematical diffraction . . . 154
4.6.1 Powder diffraction . . . 154
4.6.2 Diffraction from a fibre . . . 159
4.6.3 Two-dimensional crystallography . . . 165

5 Diffraction by perfect crystals 173
5.1 One atomic layer: reflection and transmission . . . 175
5.2 Kinematical reflection from a few layers . . . 176
5.3 Darwin theory and dynamical diffraction . . . 178
5.4 The Darwin reflectivity curve . . . 182
5.4.1 Darwin width . . . 184
5.4.2 Extinction depth . . . 186
5.4.3 The integrated intensity . . . 187
5.4.4 Standing waves . . . 189
5.4.5 Higher-order reflections . . . 190
5.4.6 Effect of absorption . . . 192
5.4.7 Asymmetric Bragg geometry . . . 194
5.5 DuMond diagrams . . . 195

6 Photoelectric absorption 203
6.1 X-ray absorption from an isolated atom . . . 206
6.1.1 Free-electron approximation . . . 207
6.1.2 Beyond the free-electron approximation . . . 211
6.2 EXAFS and near-edge structure . . . 215
6.2.1 Theoretical outline . . . 218
6.2.2 Example: CdTe nano-crystals . . . 221
6.3 X-ray dichroism . . . 226

7 Resonant scattering 235
7.1 The forced charged oscillator . . . 237
7.2 The atom as an assembly of oscillators . . . 240
7.3 The Kramers-Kronig relations . . . 240
7.4 Numerical estimate of f' . . . 243

7.5 Breakdown of Friedel's law and Bijvoet pairs 246
7.5.1 Bijvoet's experiment on chiral crystals 251
7.6 The phase problem in crystallography 253
7.6.1 The MAD method 254
7.7 Quantum mechanical description 258

Appendices

A Scattering and absorption cross-sections **261**

B Classical electric dipole radiation **267**

C Quantization of the electromagnetic field **273**

D Gaussian statistics **279**

E Fourier transforms **281**

F Comparison of X-rays with neutrons **287**

G MATLAB computer programs **289**

List of Tables **307**

References **309**

Index **313**
